

Patient Safety Event Reporting Application

American
Data
Network

Key Benefits

Save Time With Pre-Built Reports

With our application, you can quickly and easily generate and share key reports such as Contributing Factors, Event and Department, Time of Day/Week, and many more. If you're using a paper collection tool or homegrown electronic tool, many rely on event data collected through narrative form fields, which makes building the right reports very time consuming.

Simplify & Automate Your Workflow

The work queue allows for much easier management of all incidents, near misses and unsafe conditions. The automated email alert system ensures instant awareness of reported events, allowing you to address them more quickly. Plus, the ability to easily assign follow-up investigations with a few clicks enables you to better organize and prioritize event management.

Reduce Risk With Federal Protections

By using our application, you are afforded free participation in the American Data Network Patient Safety Organization. By being a member of ADNPSO, your submitted data receives federal legal protection so your team can work on events in a safe, protected environment.

What Clients Think

"Our organization previously used another product that was not nearly as user-friendly and efficient. Since the transition, I consistently hear from staff members how they 'love' American Data Network's tool. With the move to ADN, I have seen an increase in reporting."

- Debbie Hare, Director of Quality, Risk & Regulatory Compliance, Unity Health | White County Medical Center

The screenshot shows the 'Quality Assurance Communication System' interface. At the top, there's a navigation bar with 'Work Queue | Reports | Administration' and a welcome message 'Welcome Jamie Walden'. Below this is a 'Work Queue for Jamie Walden' section. A table titled 'Show Filter Options' displays a list of events with columns for Event ID, Type, Event Date, Report Date, Department, Status, Initial Harm, Due Date, Notify, Link, and LinkID. The table contains four rows of event data. Callouts point to various features: 'Robust Workflow Management' points to the 'Work Queue' section; 'Easy Access to Real-Time Reports' points to the 'Reports' link; 'Alert System & Automated Notifications' points to the 'Notify' column; 'Coordinate Follow-Up Investigations' points to the 'Link' column; 'Easily Organize Work Queue' points to the 'Status' column; and 'Easy Access to Real-Time Reports' also points to the 'Due Date' column.

Event ID	Type	Event Date	Report Date	Department	Status	Initial Harm	Due Date	Notify	Link	LinkID
1	z6AB98In	HAI	9/20/2017	9/14/2017	2 North	Followup Assigned	Severe Harm	9/21/2017 4 days		
2	uuqZWrc9	Multi	8/3/2017	8/3/2017	2 East	Pending	Moderate Harm			
3	vUVvJAK	Medication	7/28/2017	7/28/2017	2 East	Followup Assigned	N/A	9/20/2017 5 days		
4	xqeGJFsQ	Perinatal	7/28/2017	7/28/2017	2 North	Followup Assigned	Unanswered	9/18/2017 7 days
